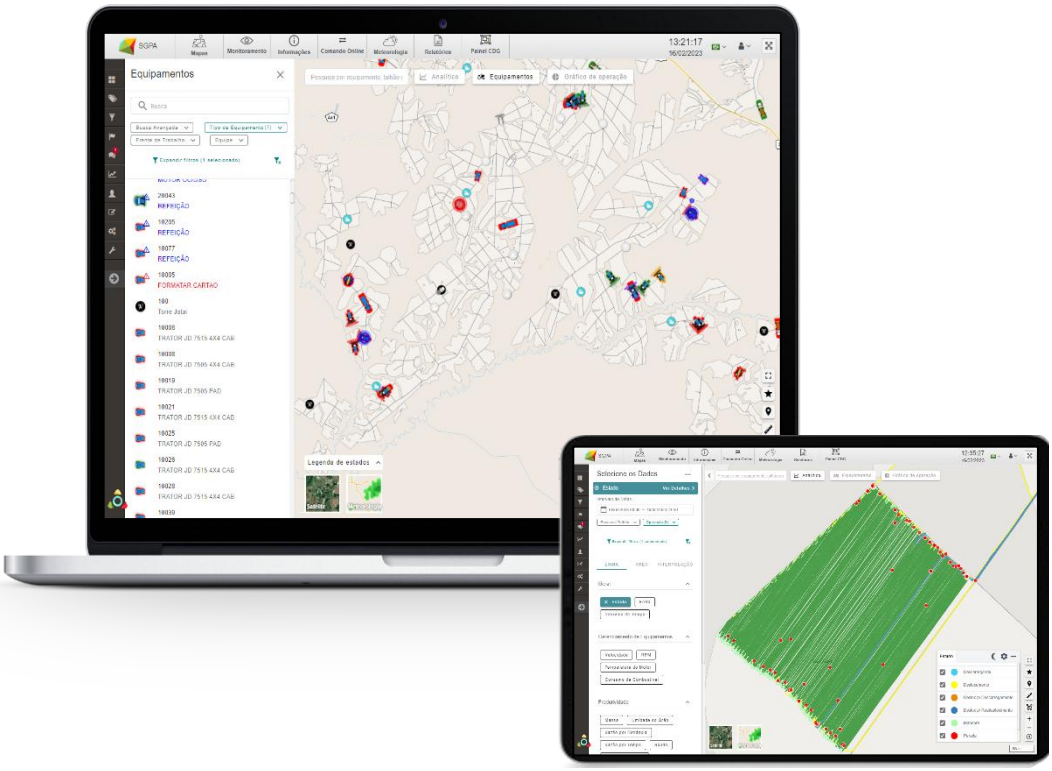
SOLINFTEC

Changelog

SGPA3
Automated Process Management System



Changelog Version 2026/278

Period: 03/25/2026 to 04/14/2026

Revision 00

Date: 05/05/2026

Some applications mentioned in this report may not be available in the package of functionalities installed in your SGPA 3.0

+55 (18) 3622-2270
Av. Brasília, 2.121 - Edif. New York Tower
Jardim Nova York - Araçatuba/SP

Thank you for being an SGPA 3.0 user!

We update our system frequently to fix bugs, improve performance, and add new features to enable a better user experience and contribute to management with higher quality and efficiency.

+55 (18) 3622-2270
Av. Brasília, 2.121 - Edif. New York Tower
Jardim Nova York - Araçatuba/SP

Summary

1. SGPA3 4

1.1 Improvements 4

1.1.1 Validations Panel – Enhancements 4

1.1.2 PBI Report – Operational Adequacy Report 6

1.1.3 PBI Report – Fertigation Notes 7

1.1.4 PBI Report – Online Loading and Transport Cutting 8

2.1 Bugs 10

2.1.1 SGPA – Spelling Correction 10

2.1.2 Report Scheduler V2 - Adjustment 11

2.1.3 Weather Graph – Adjustment 11

2.1.4 Validation Panel – Adjustment 11

2.1.5 Maps – Overlay Area 11

2.1.6 Monit+ 12

2.1.7 SGPA Login – Email Response for Password Recovery 12

1. SGPA3

1.1 Improvements

1.1.1 Validations Panel – Enhancements

Improvements were made to the Validations Panel. The first was applied to the ordering of each column of the table, where, when clicking on the name of each column, it should organize the table, and the arrow indicates its ordering.

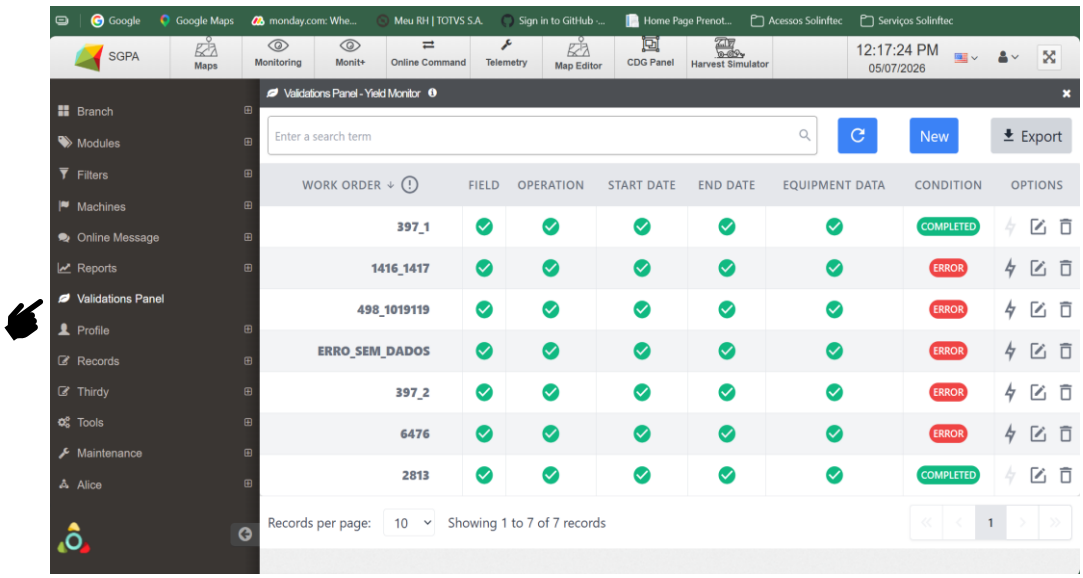


Figure 1 – Validation Panel – Performance Monitor

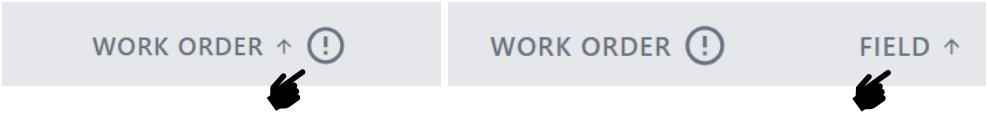

Figure 2 – Column Sorting Arrow

The search for the work order column has also been implemented, which allows you to find the item based on the characters entered in the search field.

Av. Brasília, 2.121 - Edif. New York Tower
Jardim Nova York - Araçatuba/SP

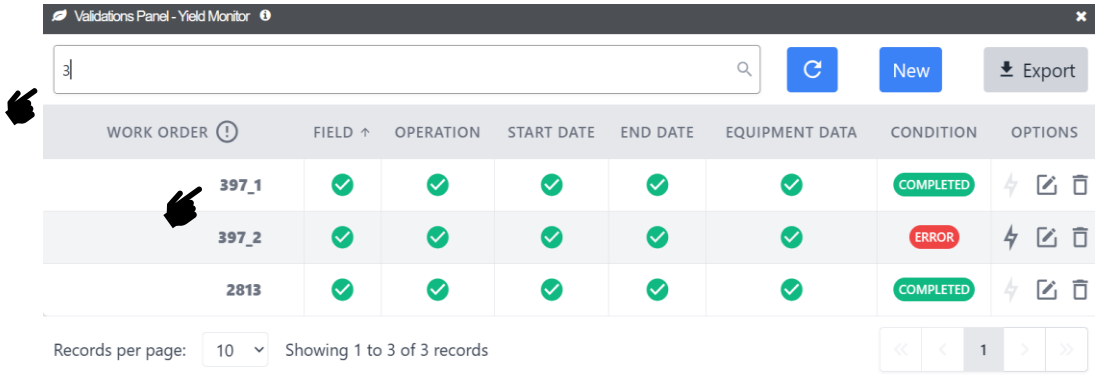

Figure 3 – Filters – Improved search for the work order column

Then we have the improvement that allows the selection of the quantities of records to be shown on the screen, for a wider view, allowing 10, 20, 50, or 100 records per page.

Figure 4 – Records by Page Filter

And finally, a button was created to export the table data.

Jardim Nova York - Araçatuba/SP

Figure 5 – Button to export the Table data

Access in: Side Menu > Validation Panel

1.1.2 PBI Report – Operational Adequacy Report

Improvement applied to the creation of the dynamic measurement filter, which allows the customer to choose whether to view the graphs in an analysis by liters or gallons. By default, when accessing the Average Consumption tab of the Operational Adequacy report, all graphs in liters will be filtered, leaving the look exactly as it has always been.

The new dynamic filter, "Choose a metric to analyze," is positioned next to the Status filter.

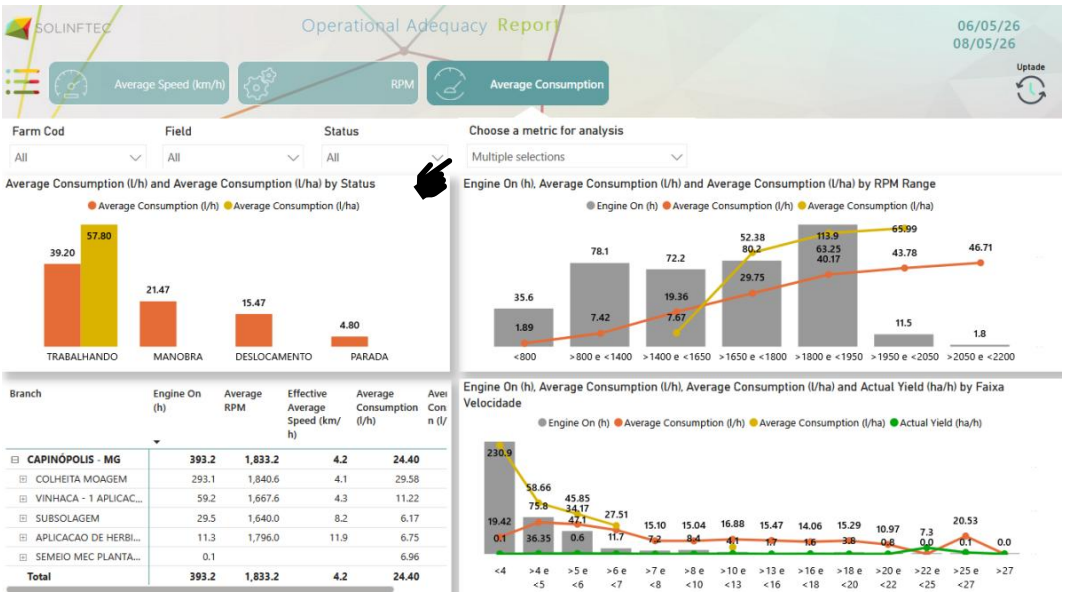

Figure 6 – New Dynamic Filter – Choose a metric for analysis

Figure 7 – Filter Zoom – Choose a metric for analysis

Access in: Side Menu > PBI > >Reports > Operational Adequacy Map Reports

1.1.3 PBI Report – Fertigation Notes

Improvement made through the inclusion in the Fertigation Notes report, the information on the Average Travel Speed (km/h), which is calculated by dividing the distance traveled (km) by the time traveled (h).

In the "Appointment" tab, at the bottom of the page, a graph was included with the information on "Loaded Displacement (km/h)" and "Empty Displacement (km/h)" by Equipment and Code. Identifier.

In the "Report" tab, the information "Loaded Displacement (km/h)" and "Empty Displacement (km/h)" was included in the table, being available in both the "Summarized" and "Detailed" views.

Access: Side Menu > PBI > Reports > Fertigation Appointments

1.1.4 PBI Report – Online Loading and Transport Cutting

Improvement made in the PBI Report Cutting Loading and Transportation of Sugarcane Online - CCT Online, with the inclusion in the CCT tab, in the Harvesters Indicators table, a column with information on RPM Effective Average Extractor. Also

+55 (18) 3622-2270
Av. Brasília, 2.121 - Edif. New York Tower
Jardim Nova York - Araçatuba/SP

in the Harvest Performance tab, in Harvester, the RPM Average Effective Extractor per Front chart was included. When you hover over the columns of the graph, you can view the Top 5 Equipment related to RPM.

Access: Side Menu > Reports > PBI > Online Reports > Cutting Loading and Transporting Sugarcane Online

2.1Bugs

2.1.1 SGPA – Spelling Correction

Spelling adjustments to the words on the following screens:

On the Water Resources present in the screen for Portuguese layout, the spelling of "Visualisacao" of the module was adjusted to "Visualização" on the SGPA Screen > the Side Menu > Records > Administration > User Group > Water Resources.

On the Equipment screen present for Portuguese layout, the term "irrígações" has been changed to "Irrigações" on the SGPA Screen > the Top Menu > Monitoring > Equipment > Right Side Menu > Show "Irrigations".

On the Input Guarantee present in the screen for Portuguese layout, there was an accentuation error; the word "Garantía" of the Input was adjusted to "Garantia" on the SGPA Screen > the Side Menu > Records > Inputs Management > Input Guarantee.

Jardim Nova York - Araçatuba/SP

Access: SGPA

2.1.2 Report Scheduler V2 - Adjustment

Correction in the Send Rule of Report Scheduling List V2 for cases that did not generate more than one report for the same field on different dates.

Access: Side menu > Reports > Report Scheduler V2

2.1.3 Weather Graph – Adjustment

An adjustment has been implemented to allow the data to work better in the generation of the Weather Graph. After correction, the data is processed and shown at the correct time.

Access Top Menu > Map V4 > Meteorology > Weather Graph

2.1.4 Validation Panel – Adjustment

An adjustment was made to the Validation Panel so that when opening the Panel and the performance monitor, the display is correct.

Access: Side Menu > Validation Panel

2.1.5 Maps – Overlay Area

An adjustment was made to the use of a new geometry for generating the equipment's operational area by the SGPA, taking into account the lateral and rear displacements of the effective area resulting from the machine implement's configuration. The objective is to align the work area with the actual track of the implement, ensuring the correct closure of the operational area. The solution resulted in the reduction of overlaps of the effective areas.

+55 (18) 3622-2270
Av. Brasília, 2.121 - Edif. New York Tower
Jardim Nova York - Araçatuba/SP

This adjustment aims to correct the misaligned geometries caused by the displacements reported by the user. The areas that may still present overlaps or failures are due to the precision of the operation itself.

It was observed that these deviations are in the order of a few centimeters, which makes it difficult to visualize and quantify them by the SGPA.

Access: Top Menu > Map > Analytical Map > Area > Overlap Area

2.1.6 Monit+

Adjustment made to the presentation of data in Monit+, so that when a user accesses the screen, the data corresponding only to the unit(s) that the user has access to is displayed.

Access: Upper Menu > Monit+

2.1.7 SGPA Login – Email Response for Password Recovery

A change has been made to the email address sent to the user throughout the system. Previously, the email sent by the system, for example, in the password recovery in the SGPA login, was the "suporte@solinfec.com.br"; it was updated to the "suporte.ti@solinftec.com.br".

Access in: SGPA

If you have any questions or other clarifications, please contact us via email suporte@solinftec.com.br or call +55 18 3622 2270.
