1. SGPA

1.1 Improvements

1.1.1 Records - Equipment

Change made in the trail type, now the record is essencial in order to the data to be presented in the map.

- Equipment that send kijo 33 must be configured for Line Trail Type in order to show the data in the trail.
- Equipment that send only the kijo 00 must be configured for Point Trail Type in order to show the data in the trail.

Access on Main Menu > Records > Equipment > Equipment

1.1.2 Meteorology

+55 (18) 3622-2270
Av. Brasília, 2.121 - Edif. New York Tower
Jardim Nova York - Araçatuba/SP

Adjustment applied in the Weather Map – Rain in order to be possible to filter only a maximum period of 90 days in the 'By Date Range' filter.

Access on upper shortcuts Menu > Meteorology > Menu Meteorology > Weather Map > Rain

2. Monitoring

The Monitoring received some updates and adjustments related to the "layout". This version has all the already existent features from the previous version, but with an interface more modern and intuitive. The main change is related to the integration with the Analytic Map and the update in real time (without the need to wait for the update via the timer).

Initially, for the purpose of homologation and application of eventual corrections, this version was released for some Clients/Environments. After this phase, the other Clients/Evironments will be informed and will receive this update along with a training to present the main changes in relation to the previous version.

Below are the latest improvements and corrections applied to the Clients/Environments that are using the aforementioned version.

2.1 Bugs

2.1.1 Alerts

Adjustment made in order to the option 'Display icon in monitoring' to be independent from the option 'Generate alert on the Monitoring' to be displayed.
