Changelog

SGPA3
Automated Process Management System

Some applications mentioned in this report may not be available in the feature pack installed on your SGPA 3.0

Thank you for being a SGPA 3.0 user!
Our system was updated in order to fix bugs, improve performance and add new features to bring a better user experience and contribute to a better quality and efficient management.

Summary

1. SGPA3

1.1 Improvements

1.1.1 Integration – Inconsistency Panel

Improvement applied in the inconsistency panel. From this version, it will be allowed to revert the status "Exported" records to "Pending" in order to make new changes and re-export of records possible. The new "Revert" option is available on the "Edit records" screen.

It is important to emphasize that the records already exported to the desired database will not be changed and that if not excluded when exporting again, they will be duplicated.

ℹ️ *Access on Main Menu > Modules > Integration > Inconsistency Panel*

1.1.2 Records – Implement Measures

Improvement applied in the implement measures aiming to attend the cultivation that have long cycles (Perennial) in order that it is possible to consider the width of the field instead of the width of the implements in the generation of worked area.

In order to consider the width of the field, some requirements must be met:

- The street width record must be filled correctly, currently it is only performed via the data bank, so in order to be performed, the specifications of the average width of the streets of the field must be sent with the shape to the support;

– The implement must be of type "0 – Fixed Size";

*– And the option "Use the width of the field" must be marked as "YES".*

1.2   *Bugs*

1.2.1   *Analytic Map – Field Filter*

Correction applied in the filter "Field" when the State and Worked Area maps are selected in order that when applying the filter, only data from the selected fields is displayed on the map.

🛈 *Access on upper shortcuts Menu > Maps*

1.2.2   Analytic Map

Correction made in the nomenclature of the maps of Area and Interpolation for the Spanish language in order to preserve the meaning of the elements to which it refers.

🛈 *Access on upper shortcuts Menu > Maps*
