

Changelog

SGPA3 Automated Process Management System

Changelog Version 2026/281
Period: 06/02/2026 to 06/22/2026

Revision 00

Data: 07/07/2026

Some applications mentioned in this report may not be available in the package of functionalities installed in your SGPA 3.0

Thank you for being a SGPA 3.0 user!

We update our system frequently to fix bugs, improve performance, and add new features to enable a better user experience and contribute to management with higher quality and efficiency.

Summary

1.	SGPA3.....	4
1.1	Improvements.....	4
1.1.1	Monitoring – Odometer.....	4
1.1.2	Record – Checklist.....	8
1.1.3	Input Optimization Report – New Tab.....	9
2.1	Bugs.....	9
2.1.1	Monitoring – Alarm Level.....	9
2.1.2	Monitoring – Online command.....	10
2.1.3	Map – Productivity Data and interpolation	10
2.1.4	Record – Fire Risk Configuration.....	10
2.1.5	SGPA – Unit Exchange.....	11
2.1.6	Telemetry – Adjustment.....	11

1. SGPA3

1.1 Improvements

1.1.1 Monitoring – Odometer

Improvement made available in the availability of Odometer data for display in the Point Map. Now, when consulting the track history of an equipment on the monitoring screen, the system will display the Odometer information in the details of the selected point. To ensure a clean and organized view, this field will be displayed only when the data is available for the equipment; otherwise, it will remain hidden.

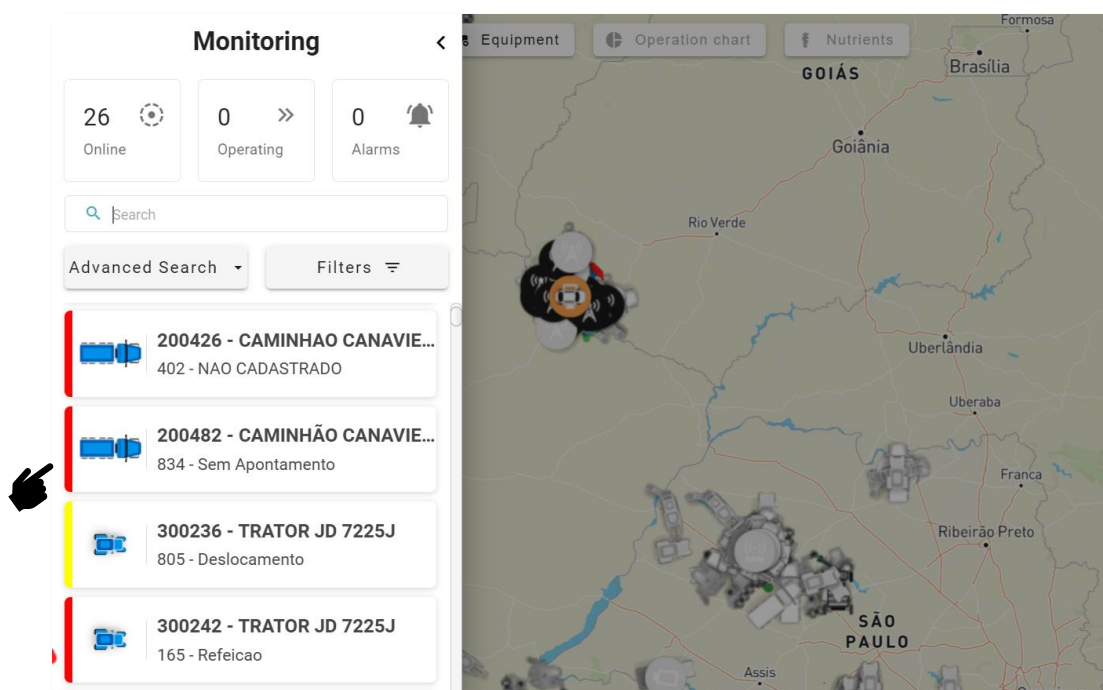

Figure 1 – Monitoring Screen – Equipment List

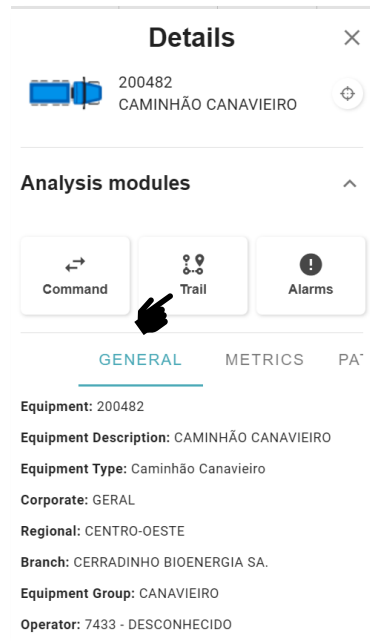

Figure 2 – Pop-up Equipment Details

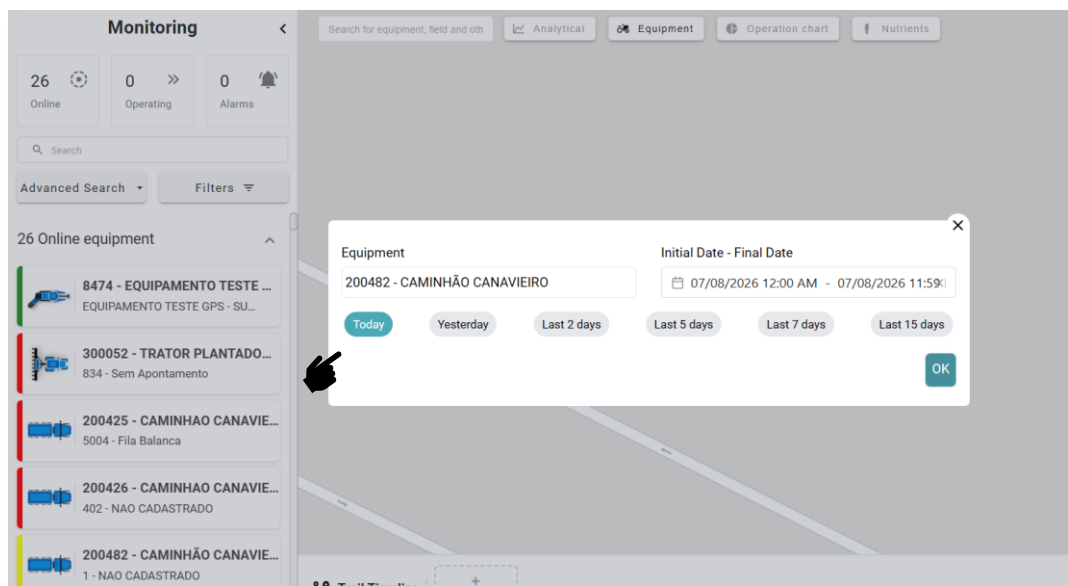

Figure 3 – Equipment selection and Trace date

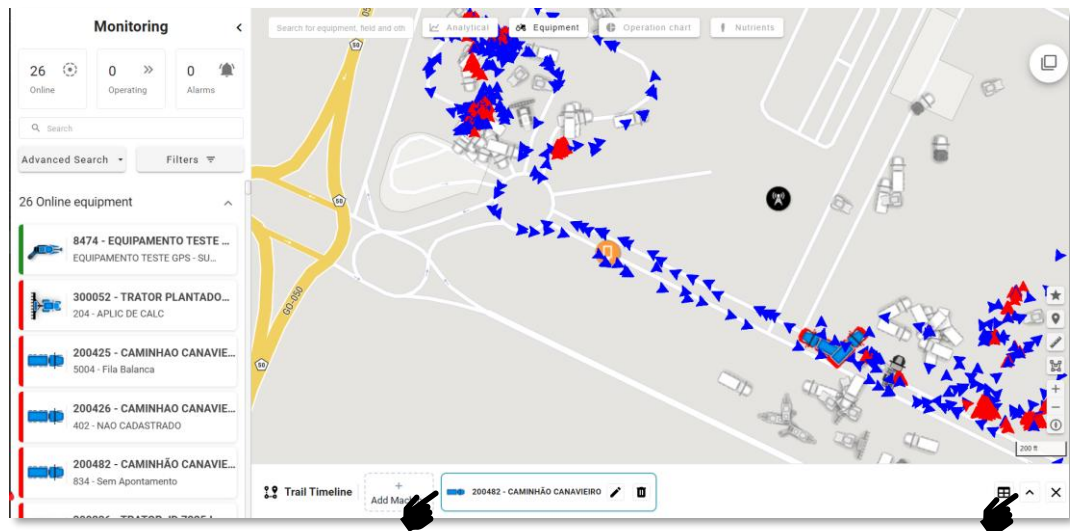

Figure 4 – Trace – Timeline

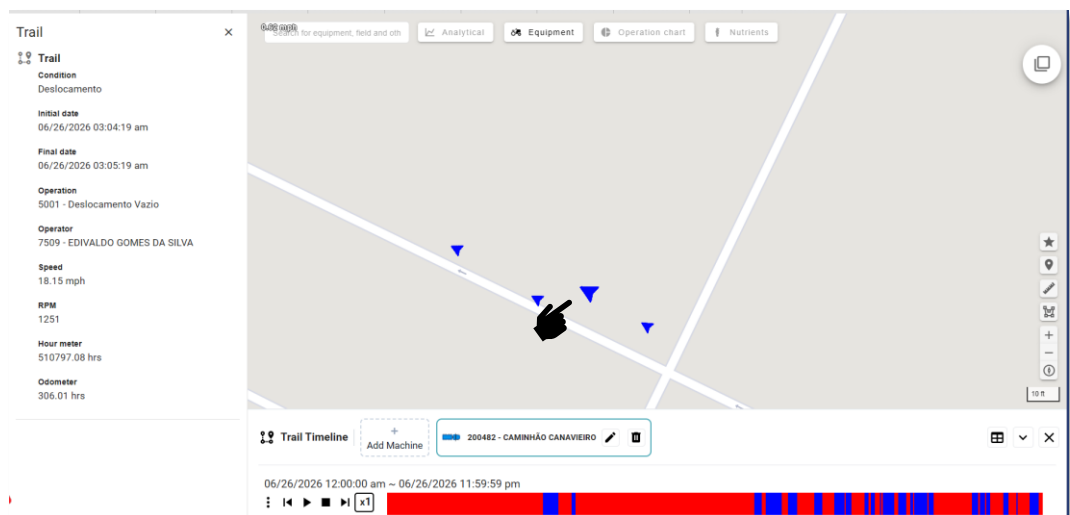

Figure 5 – Pop-up Trail

Figure 6 – Modal Alarm – Visible Odometer

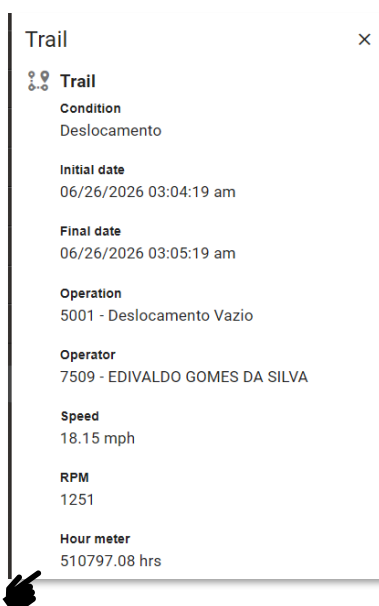

Figure 7 – Modal Alarm – Hidden Odometer

 Access in: Upper Menu > Monitoring > Equipment > Select active equipment > Option Trace > Select the desired period > Click on any of the points or marks of the route (blue arrows) > Lateral pop-up Trace > Odometer.

1.1.2 Record – Checklist

Improvement made to the Checklist Record screen of the equipment, where the limit for importing files *.csv was expanded to up to 100KB. This information is displayed on the item import screen. With this update, files that are within the new ceiling will be processed normally by the system, without the display of error messages due to size limitation.

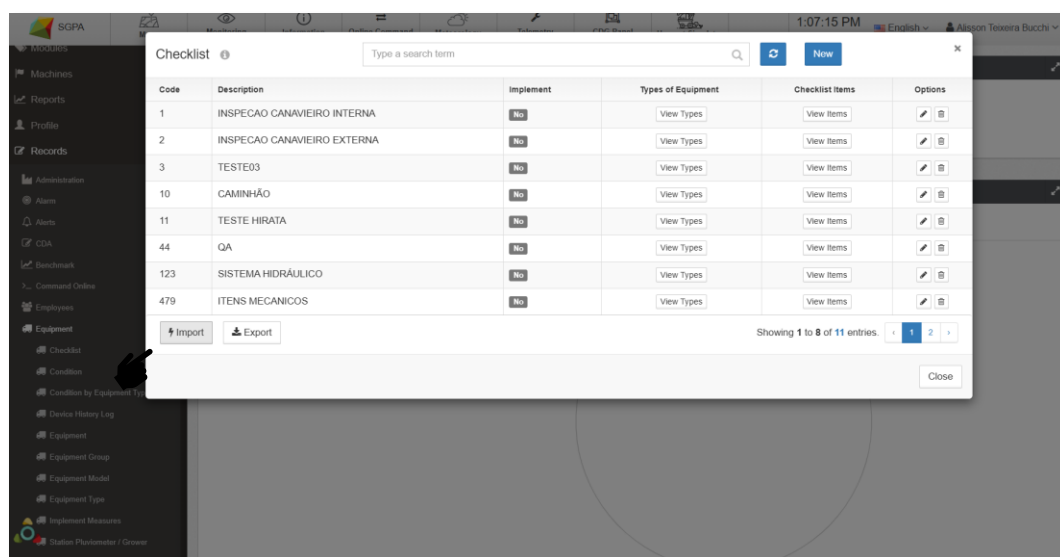

Figure 8 – Equipment Record Checklist

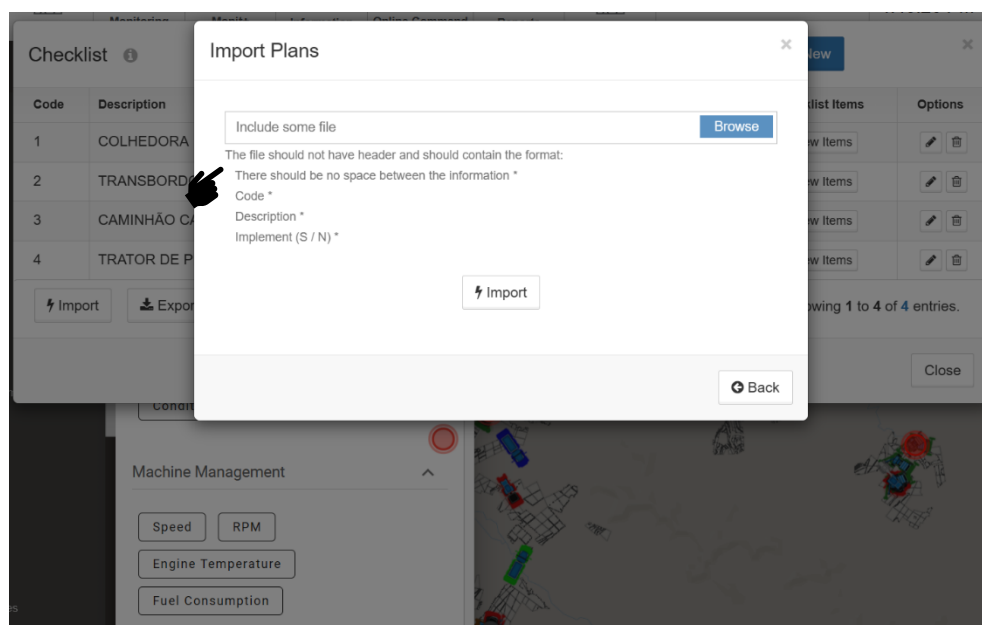

Figure 9 – Informational message indicating the accepted format on the item import screen

Access in: Side Menu > Records > Equipment > Checklist > Import

1.1.3 Input Optimization Report – New Tab

Improvement made to the Input Optimization report, with the implementation of the new "Supplied Input" tab for the analysis of vinasse supply data. With this update, the system starts to process and integrate the information from the Input supplied directly into the existing report flow.

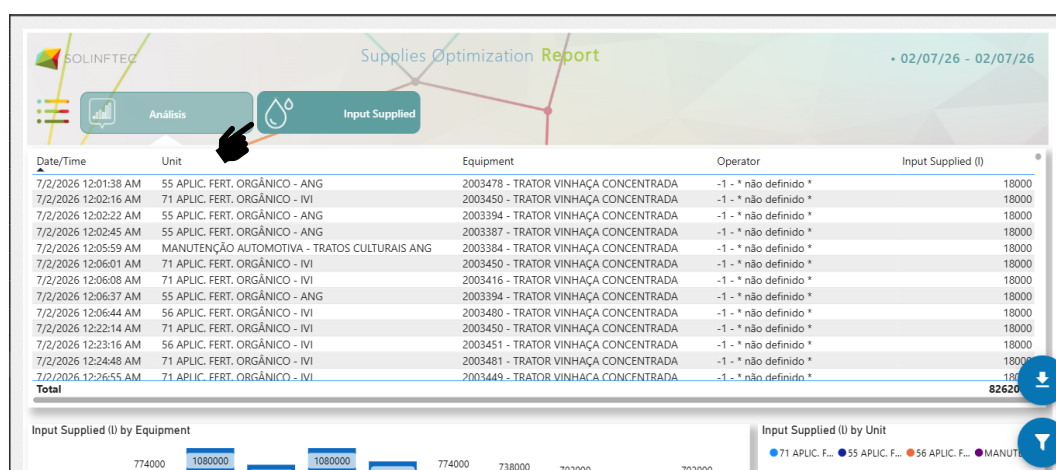

Figure 10 – Input Optimization Report – Input Supplied

Access in: Side Menu > Report > PBI > Supplies Optimizer > Supplied Input Tab

Available for Vertical Cane.

2.1 Bugs

2.1.1 Monitoring – Alarm Level

Adjustments made to the alarm ordering of the Monitoring Pop-up Screen, which now prioritizes the criticality level of events. With this update, alarms are now automatically organized from the most critical to the least critical item, from the exact moment they are issued and arrive at the system. This ensures that the most urgent cases are always at the top for faster decision-making.

Access in: Top Menu > Monitoring > Monitoring Pop-up

2.1.2 Monitoring – Online command

Adjustment made in the sending of online commands to the on-board equipment, ensuring the correct execution of the requested operations. With this update, the system has been adjusted to properly handle descriptions of operations that contain special characters.

This eliminates the communication failures that prevented the complete receipt of messages by the on-board computer, ensuring that mandatory commands — such as the exchange of operations and special codes — are successfully processed and applied to the equipment.

Access in: Top menu > Monitoring > Equipment > Click on the equipment > Equipment pop-up > Online command button

2.1.3 Map – Productivity Data and interpolation

Adjustments made to the processing and interpolation of the productivity data displayed on the map. An inconsistency prevented the visual loading of productivity in certain fields, even when the information was in the system's legend. Now, the geometric and spatial data are aligned correctly so that the map is generated and visualized perfectly.

Accessed in: Top Menu > Maps > Interpolation > Productivity Map

2.1.4 Record – Fire Risk Configuration

Adjustment made in the Configuration Screen of the Registers of Fire Risk parameters, reestablishing the rescue flow. An inconsistency displayed an error message right at the opening of the screen and prevented the "Save" button from

being enabled. Now, the dashboard loads all data normally, allowing changes to be written successfully.

Access in: Side Menu > Records > Configuration > Fire Risk

2.1.5 SGPA – Unit Exchange

Adjustment made in the Unit Change. Fixed an inconsistency that prevented the UI from fully booting, ensuring that all components are loaded in the correct order to allow for fluid, crash-free navigation.

Access in: Side menu > Unit > Select the desired unit

2.1.6 Telemetry – Adjustment

Adjustment made to the counting rule and display of alarms in the Telemetry panel. The activation behavior has been corrected to strictly follow the parameterized settings, avoiding incorrect impacts on system counters. In addition, an inconsistency that displayed undefined parameters in recent alarms has been resolved, ensuring that data is loaded and displayed correctly.

Access in: Top menu > Telemetry
