

Changelog

SGPA3 Automated Process Management System

Changelog version 2026/283

Period: 07/07/2026 to 08/03/2026

Revision 00

Date: 08/25/2026

Some applications mentioned in this report may not be available in the package of functionalities installed in your SGPA 3.0

+55 (18) 3622-2270

Av. Brasília, 2.121 - Edif. New York Tower
Jardim Nova York - Araçatuba/SP

Thank you for being a SGPA 3.0 user!

We update our system frequently to fix bugs, improve performance, and add new features to enable a better user experience and contribute to management with higher quality and efficiency.

Summary

1.	SGPA3.....	4
1.1	Improvements.....	4
1.1.1	PBI Reports – Digital Certificate of Cotton.....	4
1.1.2	PBI Reports – Fertigation Notes.....	5
1.1.3	Records – Users	6
1.1.4	Records – Equipment.....	7
1.1.5	Records – Fence/Alert Rules.....	7
1.1.6	Records – Fertigation.....	8
1.1.7	Records – Synchronization Group.....	9
1.1.8	Monitoring – Analytics.....	10
1.1.9	Map – Analytics	12
2.1	Bugs.....	15
2.1.1	Telemetry – Export Data.....	15
2.1.2	CDA Panel – Duplicity in Data	15
2.1.3	Records – Operation Parameters	16
2.1.4	PBI Reports – CCT.....	16
2.1.5	Reports – Report Generator.....	17
2.1.6	SGPA – User Preferences.....	17

1. SGPA3

1.1 Improvements

1.1.1 PBI Reports – Digital Certificate of Cotton

Improvement made in the Digital Certificate of Cotton Report (CDA), in the Overview tab, the hierarchical level of Equipment was included in the Quantity of Occurrences by Anomaly graph. Thus, making it possible to visualize both the total number of anomalies that occurred per fleet, and the amount of each type of anomaly per fleet.

In this way, the customer can more easily identify the equipment that has the highest occurrences in the rolls, allowing them to prioritize the analysis and direct field actions to the equipment that requires greater attention.

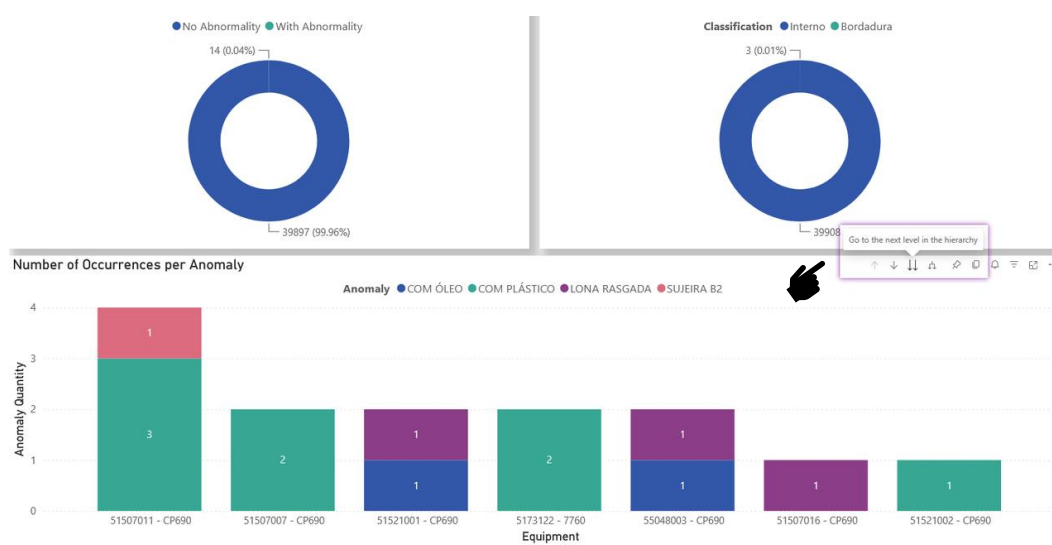

Figure 1 – Graph Number of Occurrences by Anomaly

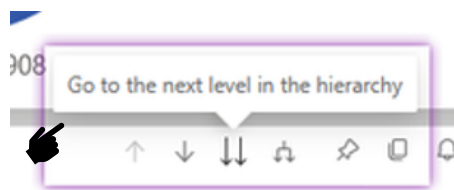

Figure 2 – PBI Report Fertigation Notes

Access in: Side Menu > Reports > PBI > Digital Cotton Certificate > Overview Tab > Graph Number of Occurrences by Anomaly > Hierarchical Level of Equipment

1.1.2 PBI Reports – Fertigation Notes

Improvement made through the implementation in the Fertigation Notes Report, in the Analytical tab, the visualization of all operators by number of trips. The view allows you to switch between the Top 10 Operators by Trip Quantity ranking and the view of all operators.

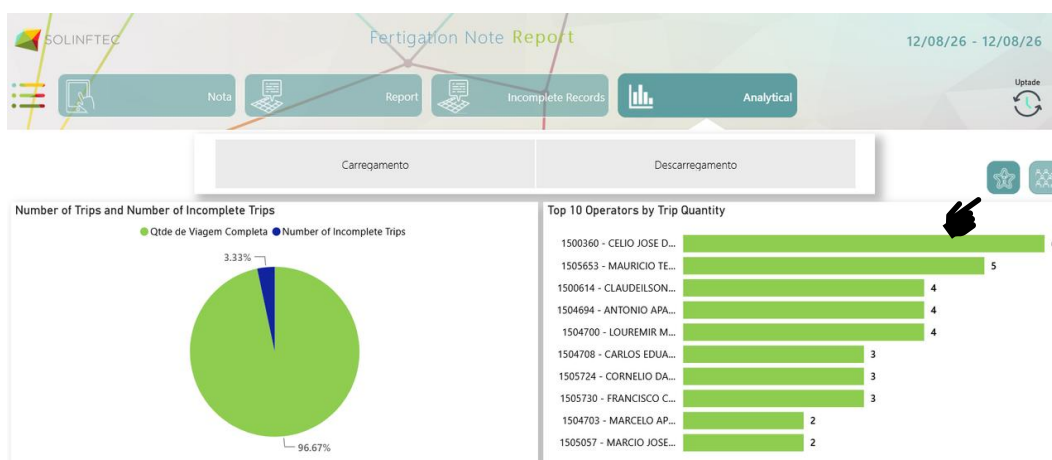

Figure 3 – Exhibition "Ranking of Top 10 Operators by Trip Quantity"

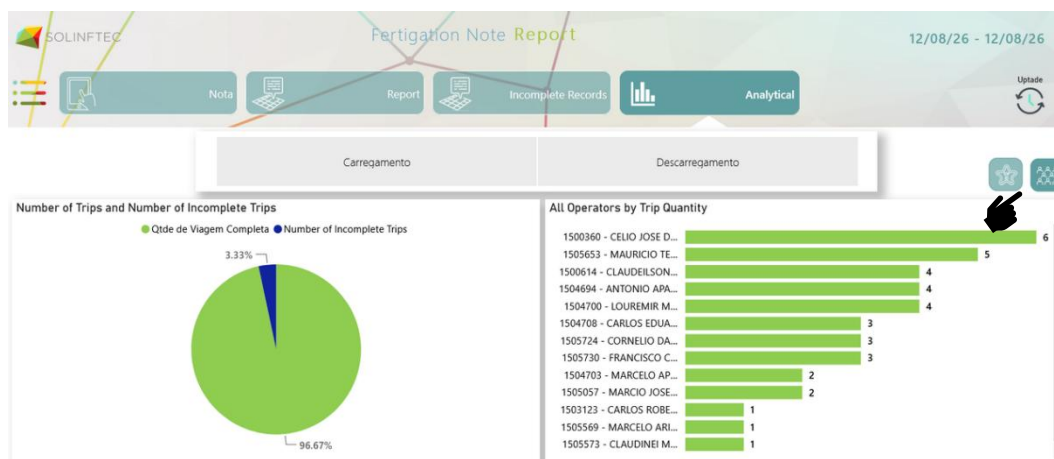

Figure 4 – "All Operators" Display

Access in: Side Menu > PBI > Reports > Fertigation Notes > Analytical Tab

1.1.3 Records – Users

Improvement made to the User Record screen through the display of more explanatory error messages. Now when trying to fill in the "Username" field with incorrect formats – the system will display the error message: "The name entered is invalid. Enter a name of up to 50 characters, starting with a letter and containing only letters, spaces, periods (.), apostrophes (') or hyphens (-). Do not use e-mail, links, or website addresses."

If you try to register an existing login or email, the system will warn: "The user or email entered already exists!". Simply enter valid data to complete the record successfully.

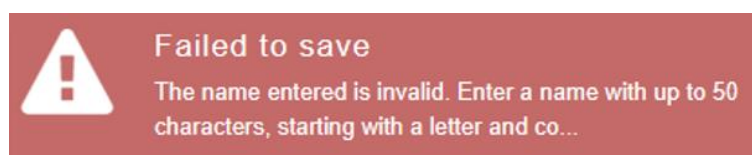

Figure 5 – New Error Message

Access in: Side Menu > Registration > Administration > Users > New/Edit Button

1.1.4 Records – Equipment

Improvement made to the Equipment Records screen by replacing generic error messages with clear and direct guidelines. Now, when trying to save a record with existing data, the system will display the message: "There is already a record with the same data entered."

If you try to enter a date and time equal to or before the last history created, the message will be: "It is not allowed to create a history equal to or prior to the last one created".

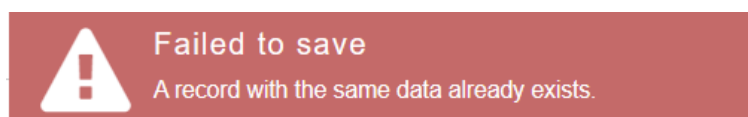

Figure 6 – New Error Message

Access in: Side menu > Records > Equipment > Equipment > New button or edit icon > Enter data from equipment already registered > Check if it is not allowed to enter repeated data.

1.1.5 Records – Fence/Alert Rules

Improvement made in the Registration of Alerts (Rules – Fence/Alert) to improve the treatment and detailing of errors, replacing generic returns with descriptive messages.

The registration and editing flow now correctly validates the required parameters and displays clear alerts in case of inconsistencies. To test, fill in the name of the rule, select the type and proceed through the steps to the Notification screen, where the Save button should remain inactive if all system behaviors are disabled, being released only when you mark at least one option as "Yes".

New Rule - Fences/Alert

1.1.6 Records – Fertigation

Improvement made to the Fertigation screen, in the Sprinkler Factor, improving the system's communication in the operations of creating, editing and

deleting records. With this update, generic returns have been replaced with descriptive messages about the cause of the problem, fully translated according to the language selected by the user.

When trying to register an existing code, the system starts to present the specific message "A spray factor with this code already exists.." replacing the old warning "Error saving!". In addition, when you add a new record with an unprecedented code and pressure, flow and radius values in ascending order, as well as when editing or deleting the item, the respective confirmation messages are displayed: "Saved successfully!", "Updated Successfully!" and "Removed successfully!".

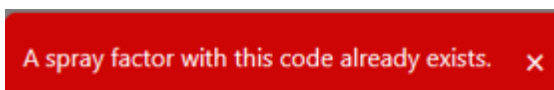

Figure 9 – "A spray factor with this code already exists."

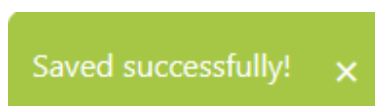

Figure 10 – " Saved successfully!"

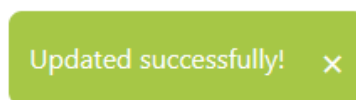

Figure 11 – "Updated successfully!"

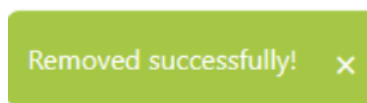

Figure 12 – "Removed successfully!"

Access in: Side Menu > Command Online

1.1.7 Records – Synchronization Group

Improvement made to the Records screen, in the Synchronization Group, where the user can now see the cause of the failure when saving the group, instead of a generic message. As soon as you try to save a record without linking any item,

the system starts to present the specific warning "At least one piece of equipment must be provided."

If the SolinfNet option is configured marked as "Yes" with a device without patrimony, the message "Online equipment patrimony not found" will be displayed, replacing the old generic warning "See the log for more details".

In addition, when filling in the information with valid equipment, the system confirms the registration by displaying the new group in the listing, also ensuring clear messages of success when editing the description or deleting the record.

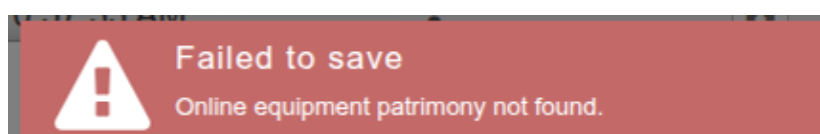

Figure 13 – Error message "Failed to save – Online equipment patrimony not found."

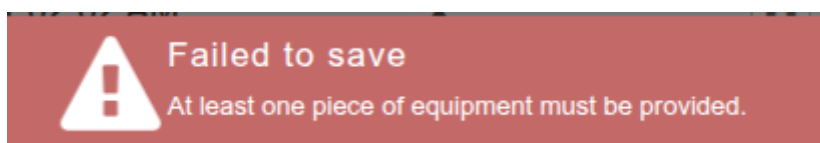

Figure 14 – Failed to save – At least one piece of equipment must be provided."

Figure 15 – "Saved" Success Message

Access in: Side Menu > Records > Synchronization Group > New

1.1.8 Monitoring – Analytics

The improvement consists of correcting the analog values from the pressure sensors of the Center Pivot equipment, converting them to corrected pressure values, expressed in bar, through the SGPA. The correction considers the variation of

pressure values during the operation of the system, allowing the data presented to be more representative in the real operating conditions.

The objective is to ensure the correct presentation of pressure values, both in the history of the Center Pivot and in real-time monitoring, enabling the verification of the proper functioning of the irrigation system and the identification of any failures during the operation of the equipment.

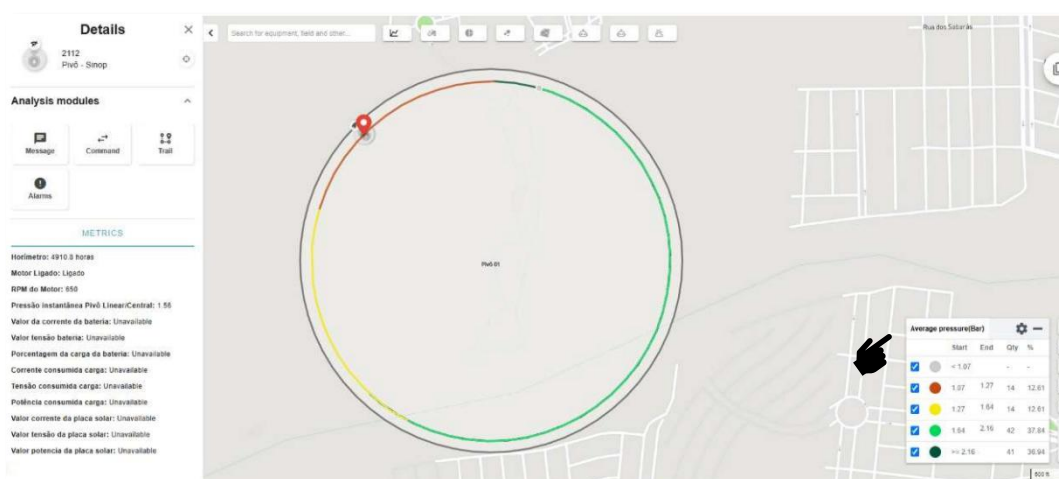

Figure 16 – Analytical - Average Pressure (Bar)

	Start	End	Qty	%
☒ 	< 1.07	-	-	-
☒ 	1.07	1.27	14	12.61
☒ 	1.27	1.64	14	12.61
☒ 	1.64	2.16	42	37.84
☒ 	>= 2.16	-	41	36.94

Figure 17 – Average Pressure (Bar) - Zoom

 Accessed in: Top Menu > Monitoring > Analytics

1.1.9 Map – Analytics

Improvement made to the Analytical Map to restrict the display of the "Hitch Type" field in the details of the stretch, which previously appeared for all users even without the active functionality. With this update, the information is displayed exclusively for customers with the contracted/active Fertigation Package and when there are valid records, automatically hiding it for the other operation profiles.

To validate the improvement, access the Top Menu > the Analytical Map, select a date and an operation outside the scope of Fertigation (e.g., Sugarcane Harvesting), generate the line map and click on a stretch; Make sure the details side pop-up doesn't display the "Hitch Type" field. On the other hand, when querying operations with active Fertigation and valid data, make sure that the field and its classifications continue to be displayed normally.

Remembering that there are 6 types of hitch in addition to type 0 "There is no information for the stretch"

Hitch Type 1 = Manual Hitching

Hitch Type 2 = Manual Rehitching

Hitch Type 3 = Manual Unhitching

Hitch Type 4 = Automatic Hitching

Hitch Type 5 = Automatic Rehitching

Hitch Type 6 = Automatic Unhitching

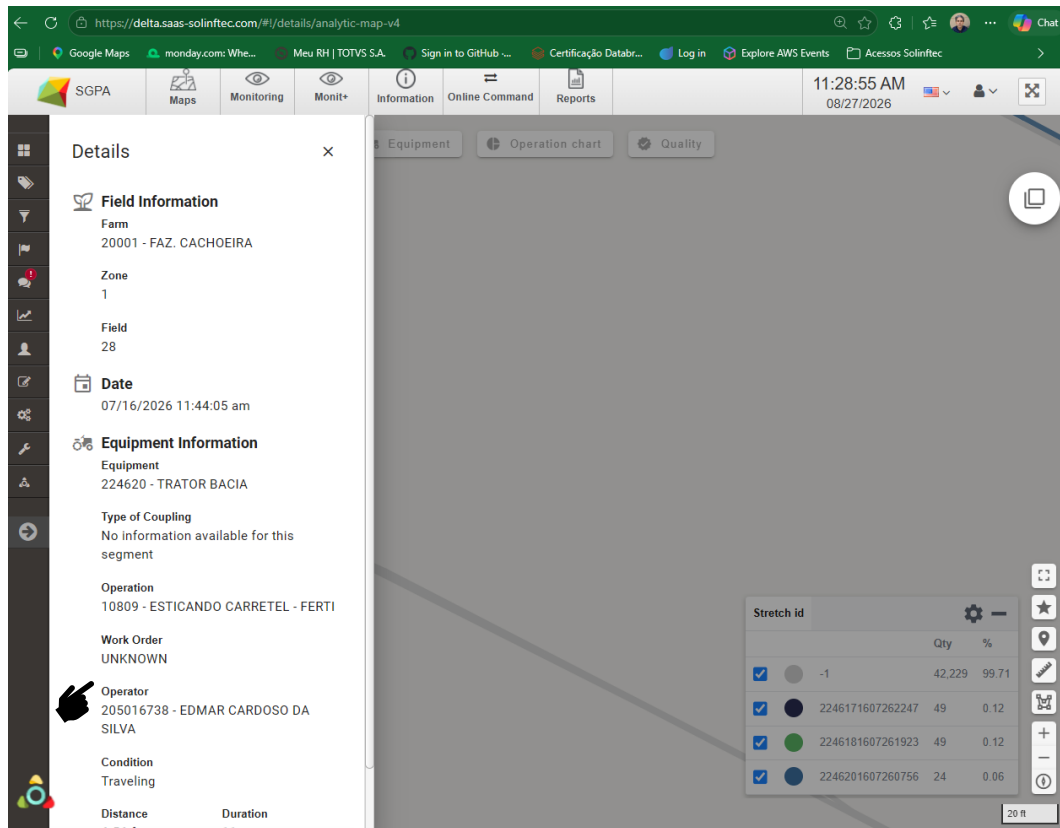

Figure 18 – Does not show the hitch type field

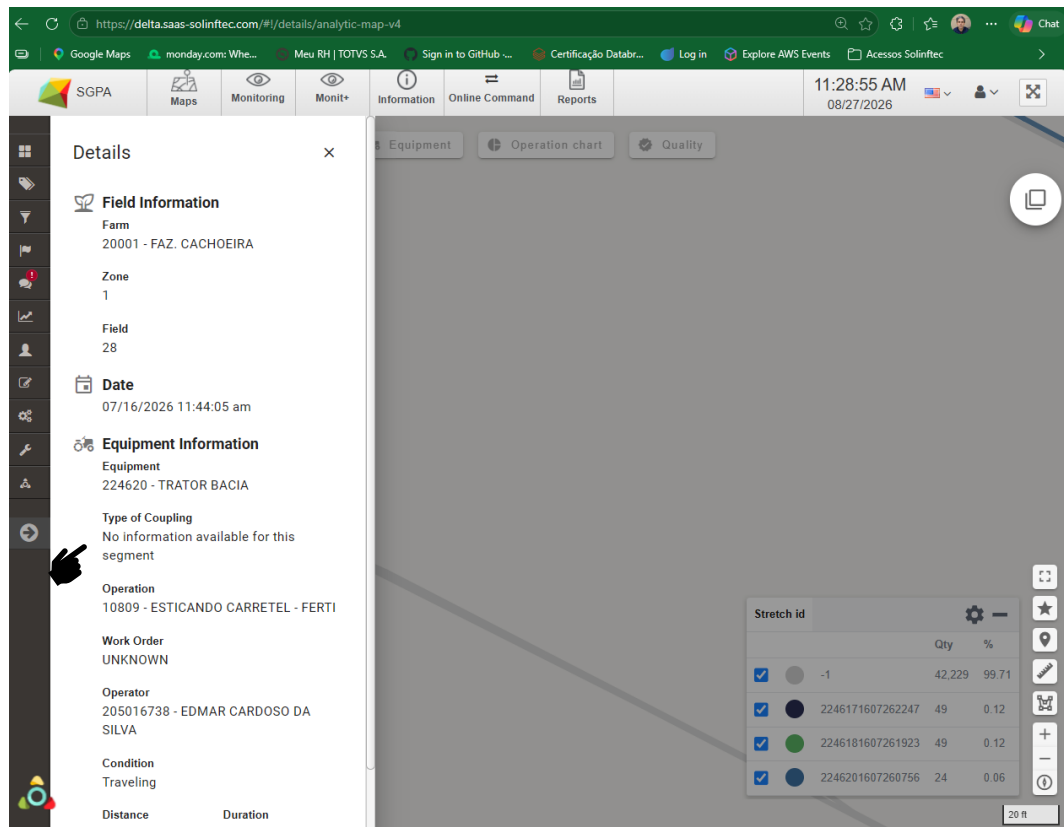

Figure 19 – Shows the type of coupling 0 "No information available for this segment"

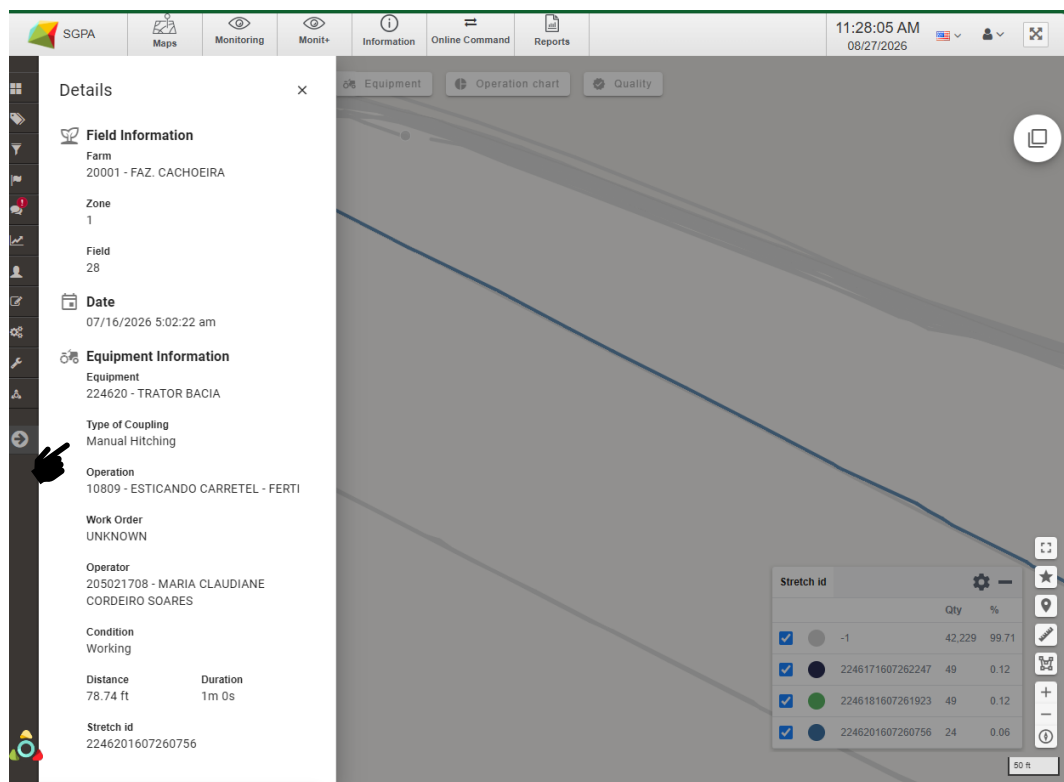

Figure 20 – Showing type 1 hitch type "Manual hitching"

Accessed in: Menu Superior > Map> Analytical

2.1 Bugs

2.1.1 Telemetry - Export Data

Adjustments made to the Telemetry module (on the Equipment Failure History screen) to correct the discrepancy between the data displayed on the interface and the exported files (CSV and PDF), ensuring that all recorded failures are displayed on both media. The identification of the equipment in the reports, improvements in the PDF layout and a new export modal with parameters of format, period and type of equipment were also implemented.

To observe the Export by Equipment Type, click on "Export Data" in the upper right corner to test the new export modal by period, format and equipment type, verifying that the data is properly grouped and identified.

To check the export of a specific piece of equipment, navigate to Telemetry > Equipment in Front > Show Equipment, select the fleet and the desired equipment, and on the Failure History screen, generate the report in CSV or PDF to compare the exact equivalence of the data displayed on the screen with the exported file.

Access in: Upper Menu > Telemetry > Export Data (Export Equipment Type)

Access in: Top Menu > Telemetry > Equipment in Front > Show Equipment (Export Specific Equipment)

2.1.2 CDA Panel – Duplicity in Data

Adjustments made to the CDA Panel, Stock tab, to correct failures and duplicity in the search for roll ID and module RFID. With this update, when performing queries through the search bar, the system starts to correctly filter the information, displaying only the corresponding record and eliminating the accumulation of duplicates in the sub-tables during consecutive searches.

To validate, enter the ID or RFID in the search field and expand the history table records to confirm that the data exactly matches the search and is free of duplicates.

Access in: Upper Menu > CDA Panel

2.1.3 Records – Operation Parameters

Adjustments made to the Operating Parameters register to correct the unit of measurement of the Humidity field, which incorrectly displayed the millimeter (mm) callsign instead of percentage (%). With this update, the field now reflects the correct parameter of relative humidity.

Access in: Side Menu > Records > Operation > Operating Parameters > Warning and Alarm Conditions > Humidity

2.1.4 PBI Reports – CCT

Adjustments made to the PBI Report of Operating Hours – Cutting, Loading and Transporting Sugarcane (CCT) – to correct the layout sizing in export and printing, which previously cut information and displayed the table disproportionately. With this update, the document now occupies the entire width of the page, ensuring the complete and faithful display of the data viewed on the screen.

To validate the correction, access the SGPA > Reports > PBI – Operational Hours > Cutting, Loading and Transporting Sugarcane, filter the complete month of April by selecting all equipment, access the Front Journal tab and locate the Operations Ranking table; then click on the options (...), select "Show as table" and click on the download icon, where the generated file should present all the information in full, without cuts.

Access in: Side Menu > Reports > PBI > Operational Hours > Cutting and Loading and Transportation of Sugarcane

2.1.5 Reports – Report Generator

Adjustments made to the Report Builder to optimize response time and query processing for the Speed Hits (Alarm Hours) report, which previously ran on continuous loading and failed to fetch long periods. With this update, the query has been restructured to ensure greater efficiency and allow for complete download of reports without interruption.

To validate the correction, access Reports > Report Generator, choose the "Alarm Hours" type and the "Speed Occurrences" report; in the Equipment tab, filter the Unit, select the desired fronts (except Reserve Front), check the Harvester type and select the fleet; then, in the Parameters tab, set a date range (e.g., from 07/01 to 07/14), select the desired format (XLS/PDF), fill in the speed parameters, click on "Generate" and confirm that the file will be generated and downloaded correctly.

Access in: Side Menu > Reports > Report Generator

2.1.6 SGPA – User Preferences

Adjustments made to the User Preferences menu in the upper right corner of the Sgpa screen to correct the text of the password change option in the Spanish version, which previously displayed the incorrect information "Cambiar contraseña y 2FA". With this update, the nomenclature has been standardized to display only "Change contraseña", aligning the interface with the active menu functionalities. To validate the correction, access the system from the top menu, change the language to Spanish, click on the user profile icon and make sure that the open option correctly presents the text "Cambiar contraseña".

Access in: Top Menu > Change language to Spanish > Click on the User Icon > View open tab and correction applied

If you have any questions or other clarifications, please contact us via email suporte@solinftec.com.br or call +55 18 3622 2270.
